Question 1

Discuss the differences between a system of difference equations and a system of differential equations. Give an example of a biological system that would most appropriately be modeled using difference equations and explain why a differential equation representation would not be appropriate.

Name:

Question 2

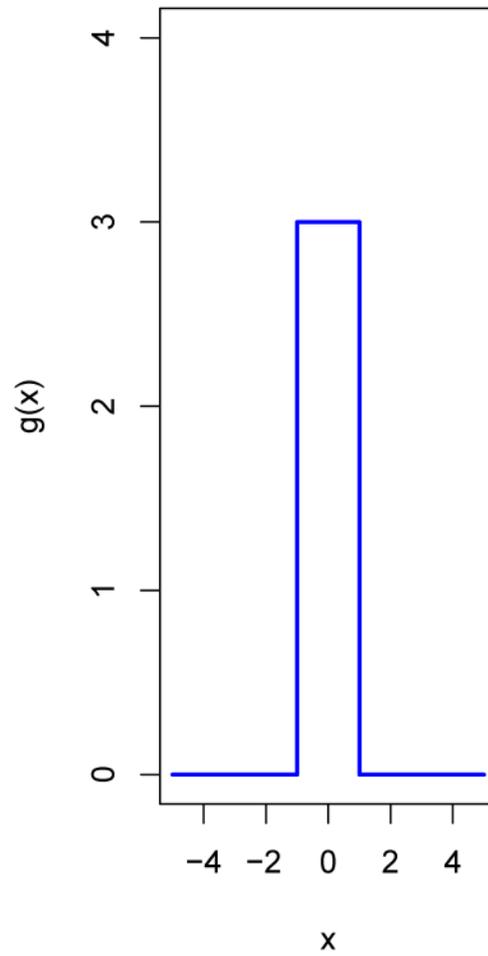

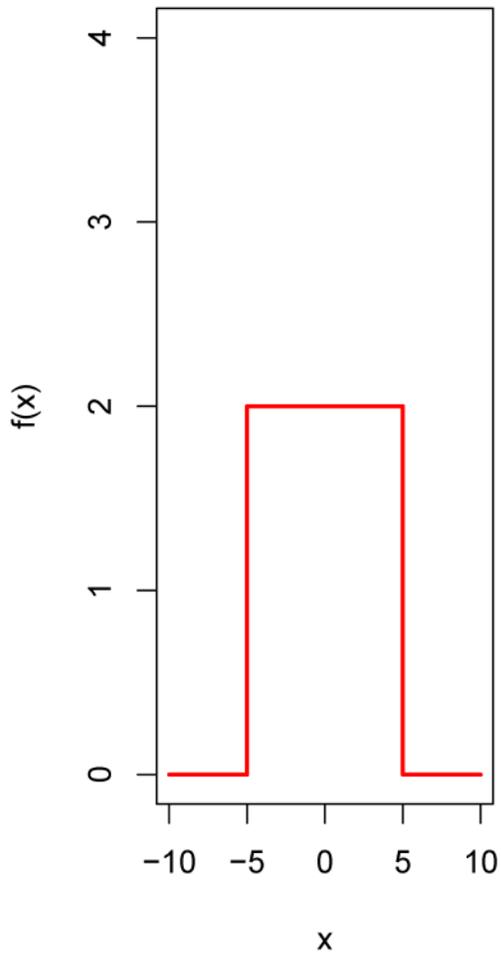

Consider the time-dependent response shown in the figure below. Estimate the time constant for the response, and explain your reasoning.

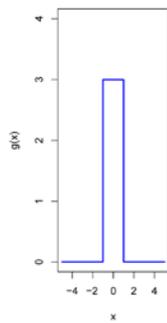

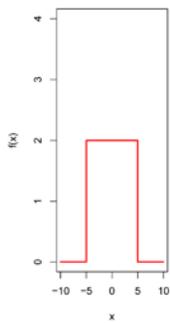

Name: _____

Question 3

Consider the two functions $f(x)$ and $g(x)$ shown in the sketches below. Sketch the convolution of the two functions: $f(x) \otimes g(x)$.

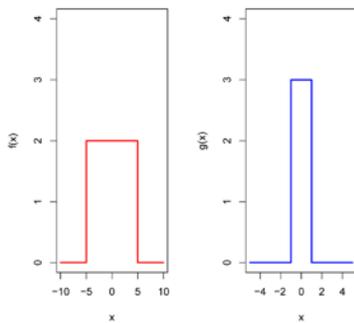

Name:

(another page if you need it)

Name: _____

Question 4

In the context of the diagram below, explain the principle of common mode rejection. Indicate where such a design might be used in a biological system, and what desirable properties it might have.

Name:

Question 5

Explain the phenomenon of aliasing, and what implications it has for determining sampling rate in experimental designs.
